=)
$$\lim_{\epsilon \to 0} -c \ln \epsilon = 1$$
 =) $\lim_{\epsilon \to 0} \ln \epsilon = -\frac{1}{c}$

However, if c constant and c +0 we can't obtain. For c=0, we get

However, if c constant and the following form of 1. So, mo constant c makes
$$f_2 = p \cdot d \cdot f$$
.

(c)
$$f_3(x) = cx^{-\frac{1}{2}}$$
, for ocx c1

(c)
$$f_3(x) = cx^2$$
, for ocx c1

$$\int_{-\infty}^{\infty} f_3(x) dx = \int_{0}^{1} cx^{-\frac{1}{2}} dx = c \frac{\sqrt{x}}{\frac{1}{2}} \Big|_{0}^{1} = 2c\sqrt{x} \Big|_{0}^{1} = 2c = 1 = 2$$

$$f_3(x) = \frac{1}{2} \times^{-\frac{1}{2}}$$

$$F_3(x) = \int_{-\infty}^{x} f_3(u) du = \int_{0}^{x} \frac{1}{2} u^{-\frac{1}{2}} du = \frac{1}{2} \cdot \frac{\sqrt{u}}{2} \Big|_{0}^{x} = \sqrt{x}$$

(d)
$$f_{1}(x) = c(4x^{3}-x)$$
, for $0 < x < 1$
 $f_{1}(x) > 0$ $(4)x \in (0,1) = 0$ $c(4x^{3}-x) > 0$
 $1x^{3}-x = x(4x^{2}-1) = 0$ for $x \in (0,\frac{1}{2})$ $\frac{f_{1}(x)}{c}$ has a sign and for $x \in (\frac{1}{2},1)$ $\frac{f_{2}(x)}{c}$ has the opposite sign. Thurston, $f_{1}(x)$ cannot be a density function.

(a)
$$f_{U}(x) = \begin{cases} 1, & 0 \le x \le 1 \\ 0, & \text{otherwise} \end{cases}$$

$$\mathbb{E}(U) = \int_{-\infty}^{\infty} x f_{U}(x) dx = \int_{0}^{1} x dx = \frac{x^{2}}{2} \Big|_{0}^{1} = > \boxed{\mathbb{E}(U) = \frac{1}{2}}$$

$$Van(U) = \mathbb{E}(U^{2}) - \mathbb{E}^{2}(U)$$

$$\mathbb{E}(U^{2}) = \int_{-\infty}^{\infty} x^{2} f_{U}(x) dx = \int_{0}^{1} x^{2} dx = \frac{x^{3}}{3} \Big|_{0}^{1} = \frac{1}{3}$$

$$\mathbb{E}^{2}(U) = \frac{1}{4}$$
(b) $\mathbb{P}(U < \alpha | U < b) = \frac{\mathbb{P}(U < \alpha)}{12} \cap \mathbb{P}(U < a) = \frac{\mathbb{P}(U < a)}{12} \cap \mathbb{P}(U < a)$

(b)
$$P(U < \alpha | U < b) = \frac{P(U < \alpha) \cap \{U < b\})}{P(U < b)} = \frac{P(U < \alpha)}{P(U < b)} = \frac{P(U < \alpha)}{P(U < b)} = \frac{F_U(\alpha)}{F_U(b)}$$

$$= \frac{F_U(\alpha)}{F_U(a)} = \frac{F_U(\alpha)}{F_U(a)$$

$$=) R(U < a | U < b) = \frac{a}{b}$$

(a)
$$P(X > x) = 1 - P(X \le x) = 1 - F_X(x)$$

 $f_X(x) = 1 e^{-1/x}, x \ge 0$
 $F_X(x) = \int_{-\infty}^{x} f_X(x) dx = \int_{0}^{x} 1 e^{-1/x} dx = -e^{-1/x} \int_{0}^{x} 1 - e^{-1/x} dx$

(b)
$$P(a \in X \leq b)$$
 for $0 < a < b$
 $P(a \leq X \leq b) = P(X \leq b) - P(X < a) = F_X(b) - F_X(a) = 1 - e^{-1b} - 1 + e^{-1a} = e^{-1a} - e^{-1b}$
=) $P(a \leq X \leq b) = e^{-1a} - e^{-1b}$

(c)
$$P(X > a + x \mid X > a) = P(X > x)$$
 for $a, x > a$

$$P(X > a + x \mid X > a) = \frac{P(X > a + x) \cap \{X > a\}}{P(X > a)} = \frac{P(X > a + x) \cap \{X > a\}}{P(X > a)} = \frac{P(X > a + x) \cap \{X > a\}}{P(X > a)} = e^{-\lambda x}$$

$$P(X > a)$$

(d)
$$\Re\left(\sin X > \frac{1}{2}\right) = \Re\left(\bigcup_{\kappa=0}^{\infty} \left\{2\kappa \pi + \frac{\pi}{6}\right\} \le X \le 2\kappa \pi + \frac{5\pi}{6}\right\}\right) =$$

$$= \sum_{\kappa=0}^{\infty} \Re\left(2\kappa \pi + \frac{\pi}{6}\right) \le X \le 2\kappa \pi + \frac{5\pi}{6}\right) = \sum_{\kappa=0}^{\infty} e^{-\lambda \left(2\kappa \pi + \frac{\pi}{6}\right)} - \sum_{\kappa=0}^{\infty} e^{-\lambda \left(2\kappa \pi + \frac{5\pi}{6}\right)} = e^{-\lambda \left(\frac{\pi}{6}\right)} = e^{-\lambda \left($$

$$1 - e^{-2\lambda \Pi}$$
(e) Let c>o.
$$F_{eX}(x) = \Re\left(e \times \langle x \rangle\right) = \Re\left(x < \frac{x}{c}\right) = F_{X}\left(\frac{x}{c}\right) = 1 - e^{-\frac{1}{2}x}$$

$$f_{eX}(x) = \left(F_{eX}(x)\right)^{1} = -e^{-\frac{1}{2}x} \cdot \left(-\frac{1}{c}\right) = \frac{1}{c} \cdot e^{\left(-\frac{1}{c}\right)x} = \sum_{x = 1}^{|x|} |x|^{2} = \frac{1}{c} \cdot \left(\frac{1}{c}\right)$$
(f) We have $\left\{\lceil x \rceil = k\right\} = \frac{1}{c} \cdot \left(-\frac{1}{c}\right) = \frac{1}{c} \cdot \left(-\frac{1}{c}\right) = \frac{1}{c} \cdot \left(-\frac{1}{c}\right)$

$$P(\lceil X \rceil = k) = P(k-1 < X \le k) = e^{-\lambda(k-1)} - e^{-\lambda k} = (e^{-\lambda})^{k-1} (1 - e^{-\lambda})$$
if we choose $p = 1 - e^{-\lambda}$

5. So, we know that
$$X \sim N(315, 131^2)$$

Therefore, $f_X(x) = \frac{1}{\sqrt{211.131^2}} e^{-\frac{(x-315)^2}{2\cdot 131^2}}$

(a)
$$f(x \in 300) = \int_{-\infty}^{300} \frac{1}{131\sqrt{2\pi}} e^{-\frac{(x-315)^2}{2\cdot |3|^2}} dx = F_X(300)$$

if we substitute $\frac{x-315}{|31|}$ with y we get

$$\Re(x \le 300) = \int_{-\infty}^{\frac{300-315}{131}} \frac{1}{\sqrt{2\pi}} e^{-\frac{y^2}{2}} dy = \underbrace{\int_{-\infty}^{\infty} (-0.115)}_{-\infty} = \underbrace{0.454}_{-\infty}$$

(b)
$$\Re(X \leqslant 500) = F_X(500) = \int_{-\infty}^{500} \frac{1}{131\sqrt{2\pi}} e^{-\frac{(X-315)^2}{2\cdot131^2}} dX = \int_{-\infty}^{\frac{500-315}{131}} \frac{1}{\sqrt{2\pi}} e^{-\frac{y^2}{2}} dy =$$

$$= \Phi(1.412) = 0.921$$

(c) Now, we test 20 smokers and we want the probability that at most one has a nicotine level higher than 500.

$$\frac{P(\text{maximum one > 500})}{P(\text{maximum one > 500})} = \frac{P(\text{none > 500})}{P(\text{20}) - \text{mumber of ways}} = \frac{P(X 5500)}{P(X 5500)} + \frac{P(X 5500)}{P(X 5500)} = \frac{P(X 5500)}{$$

if we uplace P(x5000) with p, we get:

$$P(maximum one > 5.00) = p^{20} + 20(1-p)p^{19}$$

Now, We know from (b) that $p = 0.921$ | => $p^{20} + 20(1-p)p^{19} = 0.193 + 20.0.019 \cdot 0.209 = 0.193 + 0.330 = 0.523$

6. Let R denote the radius of the circle. We know that R~ U [0,6]. Therefore, we have:

$$\oint_{R} (x) = \begin{cases} \frac{1}{b}, & \text{otherwise} \\ 0, & \text{otherwise} \end{cases}$$

(B)
$$F_R(x) = \begin{cases} \frac{x}{b}, & o \le x \le b \\ o, & o \end{cases}$$
, otherwise
$$E(R) = \int_{-\infty}^{\infty} x f_R(x) dx = \int_{0}^{b} x \cdot \frac{1}{b} dx = \frac{x^2}{2b} \Big|_{0}^{b} \Rightarrow$$

©
$$\mathbb{E}(R) = \frac{b}{2}$$

 $\mathbb{E}(R^2) = \int_{-\infty}^{\infty} x^2 f_R(x) dx = \int_0^b \frac{x^2}{b} dx = \frac{x^3}{3b} \Big|_0^b = \frac{b^2}{3}$
 $\mathbb{E}^2(R) = \frac{b^2}{2}$
D) $\text{Van}(R) = \frac{b^2}{12}$

(b) $Van(R) = \frac{b^2}{12}$. Now, we want the same results for the area A, which we know is equal to πR^2 .

•
$$F_A(x) = P(A \le x) = P(\overline{n} R^2 \le x) = P(R^2 \le \frac{x}{\overline{n}}) = P(-\sqrt{\frac{x}{n}} \le R \le \sqrt{\frac{x}{\overline{n}}}) = P(R \le \sqrt{\frac{x}{\overline{n}}}) - P(R \le \sqrt{\frac{x}{\overline{n}}}) = P(R \le \sqrt{\frac{x}{$$

 $-P(x<-\sqrt{\frac{x}{\pi}})=F_R(\sqrt{\frac{x}{\pi}})-F_R(-\sqrt{\frac{x}{\pi}})$ We already know that for x<0 we have $F_A(x)=0$ (area cannot be negative!) and therefore we only worked with x>0. We have $F_R(-\sqrt{\frac{x}{\pi}})=0$ from (B). Now,

$$F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{\frac{x}{n}} \cdot \frac{1}{b} & \text{if } o_{N} \sqrt{\frac{x}{n}} \cdot b \\ \text{o} & \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwise} \\ \text{otherwise} \\ \text{otherwise} \end{cases} \Rightarrow F_{R}(\sqrt{\frac{x}{n}}) = \begin{cases} \sqrt{x} & \text{otherwis$$

=)
$$F_A(x) = \begin{cases} \frac{\sqrt{x}}{b\sqrt{\pi}}, & \text{if } 0 \le x \le \pi b^2 \\ 0, & \text{otherwise.} \end{cases}$$

$$\mathbb{E}(A^2) - \mathbb{E}^2(A) = \frac{\pi^2 b^4}{5} - \frac{\pi^2 b^4}{9} = \frac{4\pi^2 b^4}{55}$$
.

7. Let X be a cts. n.v. taking values in [0,6] with c.d.f. Fx which is strictly increasing on [0,6].

(a) We have

$$F_{F_X(x)}(y) = P(F_X(x) \in y) = P(X \in F_X^{-1}(y)) = F_X(F_X^{-1}(y)) = y$$

Therefore,

$$f_{F_{X}(x)}(y) = \frac{d}{dy} F_{F_{X}(x)}(y) = 1 \quad (as F_{x}: [a,b] \rightarrow [a,b] \rightarrow$$

$$\Rightarrow f_{F_{X}(x)}(y) = \begin{cases} 1, & \text{if } 0 \leq y \leq 1 \\ 0, & \text{otherwise} \end{cases} \Rightarrow F_{X}(x) \sim U[0,1].$$

(b) Let U~U[0,1] We want to find the distribution of the n.v. Fx'(U). First, we know that: $f_U(y) = \begin{cases} 1, & \text{for } 0 \leq y \leq 1 \\ 0, & \text{otherwise} \end{cases}$ Fu(y)= { y, for oxy &1 Fx: [9,6] -> [0,1] is an increasing function => Fx is an increasing function Proof: Fx increasing (strictly) => Fx > 0 => =) $(F_X^{-1})' = \frac{1}{F_X^2 \circ F_X^{-1}} > 0 =) F_X$ strictly increasing, too. Now, we have $f_{X'(u)}(y) = f_{U}\left(\left(F_{x}^{-1}\right)^{-1}(y)\right) \frac{d}{dy}\left(F_{x}^{-1}\right)^{-1}(y) = f_{U}\left(F_{x}(y)\right) \cdot \frac{d}{dy}F_{x}(y)$ $f_{F_{-}^{-1}(0)}(\lambda) = f_{0}(E^{\times}(\lambda)) \cdot f^{\times}(\lambda)$ $\uparrow_{\mathsf{X}} : \left[\mathsf{a}, \mathsf{b} \right] \to \left[\mathsf{o}, \mathsf{1} \right] \Rightarrow \mathsf{o} \in \mathsf{F}_{\mathsf{X}}(\mathsf{y}) \in \mathsf{1}$ $f_{X}^{-1}(v)(y) = f_{X}(y) = 0$ The distribution of $F_{X}^{-1}(v)$ is the same as the distribution of X. (they have equal p.d.fs) (C) U1, U2, ..., Um are drawn from U[0,1]. We proved at (b) that if X is a cts. 1. v. with Fx strictly increasing and U~U[0,1], then Fx'(U)~ X. Now, we have to simulate a nandom sample X1, X2, ..., Xn from the distribution with density f(x)= ne-mx, x > 0, which is Exp(n). We want Xi ~ Exp (M) and as Fx; is strictly increasing (Fx; = fx; >0), we cam say that Fx: (Ui) ~ Exp(x). As $F_{X_{i}^{(x)}} = F_{X_{i}^{(x)}} = 1 - e^{-\mu x}$, $x \ge 0$ for all $i \in \{1, 2, ..., m\}$ => Xi = h-1(Ui), where h(x)=1-e-Mx => h-1(y)=-1/m log(1-y)=> $\Rightarrow X_i = -\frac{1}{\mu} \log (1 - U_i), \text{ for all } i \in \{1, 2, ..., m\}.$
